Improving student learning by
helping teachers do what they love

COACHING FOR A VIRTUAL ENVIRONMENT

As we consider variations for the school year 2020-21, one truth seems certain: Teachers will be adapting their instructional delivery. Mastering the tools was the first step; many are now proficient with some tools for delivery, be it Google Classroom, Seesaw, Padlet or Flipgrid. The challenge forward is revising our instructional pedagogy to meet the different demands of online learning.

While the foundations of good instruction, such as clear learning targets, engagement, inquiry and formative assessment all remain the same, new approaches are needed for online delivery. For example, how do we engage students without keeping them glued to the computer? How do we use technology to collaborate with co-teachers and support staff? How do we implement universal access strategies in virtual instruction? It's not the technology that does the job of teaching; it is up to us to leverage that technology creatively in concert with our teaching philosophies and smart pedagogical practice to create the best experience for students.

Teachers will need well-paced, accessible professional development and welcoming, articulate mentors to coach them in this process. Demonstrated Success invites you to participate with other member schools in our "Coaching for a Virtual Environment" to make sure that your teachers get the support they need in the upcoming year.

Support will include:

- Twice monthly webinars from September to June (live and recorded)
- Resource and discussion site will feature a 1-page vetted resource list for each webinar
- Each webinar will end with an actionable challenge to try in class that week
- Office hours 1x weekly for teachers to call in to share their ideas, and discuss questions based on the webinars
- Community conversations 1x per month with special interest cohorts
 - Engaging parents
 - Supporting special needs and EL learners
 - Implementing effective grade-level teams

SAMPLE WEBINAR TOPICS

Techniques for Student Engagement

Strategies to Create a Connected Classroom Community

Ideas for a Healthy Schedule for Students

Collaborating with Co-teachers, Support Staff and Specialists

Systems for Special Education & EL Teachers and Paraprofessionals to Collaborate with Classroom Teachers

Tools for Online Collaboration Between General Education & Unified Arts

Collecting Artifacts and Assessment Data to Judge Student Mastery

Guided Reading and Conferencing with Students K-5

Using Manipulatives During Virtual Math Instruction K-5

Strategies to Improve your Morning Meetings & Advisories

Engaging Parents to Help Their Students

Implementing Synchronous & Asynchronous Collaborative Student Work Groups

Ideas to Measure Student Engagement / Attendance

Appropriate Special Education Accommodations

Accurately Diagnosing Needs for ELL & Newcomer Students and Providing Appropriate Instruction

Planning for Performance Assessment & Project Based Learning

Instructional Strategies to Build Autonomy and Agency for Students

Supporting Students with Executive Functioning Challenges

Pricing based on school size. Packages start at \$2,000.

**Schools can purchase additional days for their districts for in-depth training on any of the above topics*

***Webinars may vary slightly based on school needs*

**Access to
30 hours
of PD**

**Timely &
relevant
training for
all staff**

“Every webinar I attend that you have given has helped me feel more confident as I swim in this technological tsunami that has collided with my life.”

“Learning about ways to stay organized and to assist my students with severe executive functioning issues was the most beneficial to me. I am anxious to see how I can tweak some of the charts presented in a manner to suit my students.”

HOME/SCHOOL CONNECTION: PARENTS AS INSTRUCTIONAL PARTNERS

Families are an integral part of student learning now more than ever. How do schools adequately help families in the supportive role of educating their children? Just as schools provide professional development for educators, we believe families need the opportunity to grow and learn as educators.

Your families will benefit from:

- Monthly webinars that support them as educational partners
- Office hours for parents of students K-8 to dive deeper into the month's webinar and resources
- Monthly guest speakers focusing on social emotional learning
- Online standards-aligned grade level resources and strategies

Your school/district will benefit from:

- Families feeling valued and empowered with effective practices to support their children
- Educators with increased bandwidth because they have a partner in supporting families
- A consistent approach between parents and teachers

Pricing based on school size. Packages start at \$4,000.

Additional specific district support available.

"Their team quickly created a tiered support system to provide virtual professional development for teachers, leaders and families. They produced and promoted webinars (multiple per day), resource guides and developed community discussions to help school leaders and teachers pivot to virtual instruction. Demonstrated Success' support reached the vast majority of our educators in New Hampshire, and their resources are still being used. The support Demonstrated Success provided to move New Hampshire educators to virtual instruction was crucial."

*– Caitlin Davis,
Division Director, NH DOE*

Grade-Level Resources

STRENGTHENING YOUR SCHOOL'S MTSS (MULTI-TIERED SYSTEM OF SUPPORTS)

Due to school closures in the spring, educators were unable to teach some material traditionally addressed at the end of the school year. To add to this challenge, we are experiencing a longer than usual summer which will exacerbate the "summer slide." You are probably wondering which skills your students will be able to demonstrate and where the gaps will lie when school resumes in the fall. We can help put your questions to rest with three distinct service options:

DIRECT SUPPORT

Our Demonstrated Success team has decades of experience collecting, reporting and analyzing student data to determine where students are in the trajectory of their grade level standards and competencies. We can work remotely with your teacher teams to build the framework for this process, slowly releasing responsibility so they accomplish this work independently. Our proven method will enable teachers to identify areas of need and deliver interventions as needed.

Our initial focus will be on grade and subject-level team building, and then our trainers will guide your team to:

- Create assessments for Math, Reading & Writing
- Collect and analyze data
- Identify intervention needs
- Schedule & plan for interventions
- Select & develop intervention strategies

OUTSOURCED SUPPORT

If buy-in or time is an issue for your educators, you can choose to outsource most of the above sections of the MTSS process. For example, we can create assessments that align with standards, collect the results, and generate a report to help your teachers target their intervention instruction.

STEP-BY-STEP DATA DRIVEN INSTRUCTION

Our coaches will facilitate your grade level/content area teams through each step of the data driven instructional cycle using our guide: *Tools and Protocols to Implement PLCs with Fidelity*.

In this hands-on, experiential 21-week webinar series (see next page) beginning in mid-September, our trainers will begin each session by introducing and providing templates and models of each data driven inquiry step. Teams will execute on their own and share-out at the next weekly webinar. Teams will self-assess, establish improvement goals, and work through a second cycle with our support, repeating the process until mid-February. A weekly virtual office hour will be available for teams to ask our trainers for assistance.

WEBINAR TOPICS

Review of Professional Learning Communities (PLC)

Guiding Principles of an Effective Team: Norms, Roles & Communication

Operationalizing the PLC Self Evaluation Rubric

Goal setting: Use Data to Establish Your Year-Long Goal

Choosing Learning Targets: Standards vs Curriculum Maps vs Pacing Guides

Defining Cycle 1: Creating a Pre-Assessment

Abbreviated Data Dive Protocol for Pre-Assessment Data

Establishing a Cycle Smart Goal and Student Intervention Groups

Identifying Strategies and Materials for Intervention

Creating or Choosing a Post Assessment or Progress Monitoring Tool

Abbreviated Data Dive Protocol for Post-Assessment Data

Documenting and Celebrating Student Progress

Self-Assessment and Goal Setting with the PLC Rubric

Defining Cycle II: Pre-Assessment

Abbreviated Data Dive Protocol for Pre-Assessment Cycle II Data

Establishing a Cycle II Smart Goal and Student Intervention Groups

Identifying Strategies and Materials

Creating or Choosing a Post Assessment or Progress Monitoring Tool Cycle II

Abbreviated Data Dive Protocol for Pre-Assessment Data

Documenting and Celebrating Student Progress Cycle II

Self-Assessment and Goal Setting with the PLC Rubric

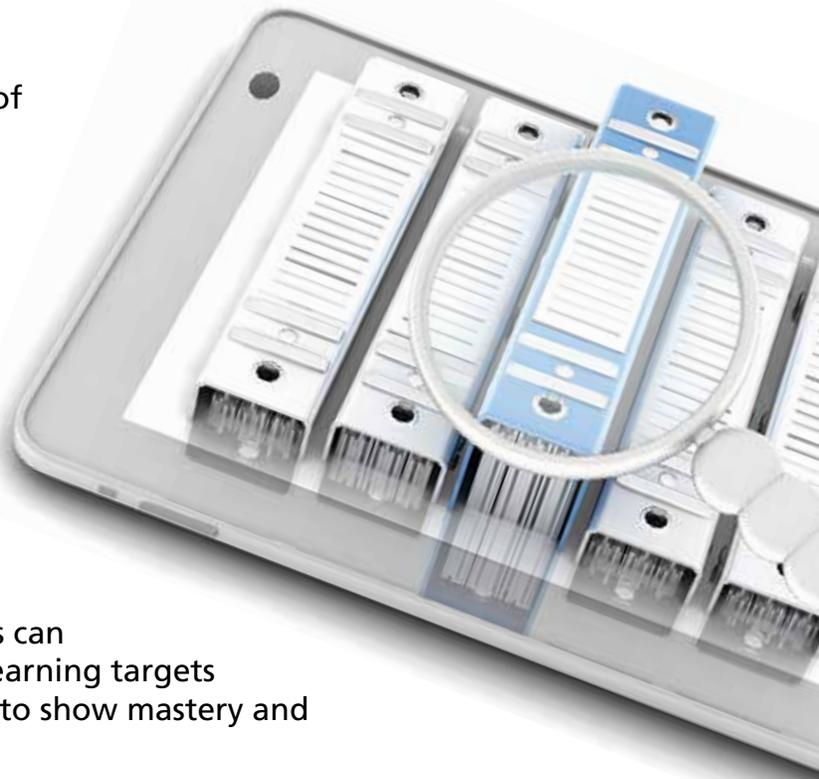

Pricing based on school size. Packages begin at \$1,500.

STUDENT PORTFOLIOS

The virtual learning experiment this spring has prevented educators from administering many of their traditional assessments. The upside of this is the challenge of finding alternative ways to judge whether a student can demonstrate mastery of specific skills and concepts. The Demonstrated Success team took this challenge and ran with it. We designed the Online Portfolio Solution. The Demonstrated Success Online Portfolio Solution provides a centralized system for teachers and students to house student work. Within a student's Portfolio, grade level learning targets are defined by subject area, as well as, teacher resources to support student learning. Students and teachers can select work that represents mastery of chosen learning targets and create a body of work that allows students to show mastery and teachers to evaluate.

This Online Portfolio Solution:

- Defines grade and subject area standards and learning targets
- Links to learning resources per standard
- Offers student models/exemplars per learning target
- Creates a consistent system to house, organize, and disseminate student learning collaboratively between teacher and student
- Fosters engagement and self direction as students view explicit learning targets and make choices about how to show their mastery
- Allows for student & teacher dialogue around student work and mastery of learning targets

If your school district is looking for a consistent platform to identify student needs, create a tailored plan to meet needs, and empower students to take ownership of learning, the Online Portfolio Solution is for you. Contact us for more information at info@DemonstratedSuccess.com
